

Monday and Tuesday 19th/20th January 2015

Understanding the World

Science

We have used freezing and melting as a focus for a small experiment/investigation.

We watched a short clip on the interactive white board about Snow, Ice and Water (BBC KS1 videos)

We then talked about how we could make things freeze. The children talked about things that they find in their freezer at home—such as ice lollies and ice cream!

We decided to put some small toy animals in bags of water and we then put them in the freezer over night.

We discussed what we were going to do and what we thought might happen.

On Tuesday morning, we looked at the bags of water and discovered that the water had turned to ice and that the animals were trapped inside.

The children discussed their observations and recorded their ideas and opinions either individually or as part of a group.
