Computing

Using Scratch Junior application.

Scratch is a programme designed for use by children.

Children snap together graphical programming blocks to make characters move, jump, dance, and sing. Children can modify characters in the paint editor, add their own voices and sounds, even insert photos of themselves -- then use the programming blocks to make their characters come to life.

It is a really fun application to use and the children in Class One did really well using it for the first time today.

We all made the cat character move across the screen. Lots of children enjoyed exploring the other blocks too—such as the block to make the cat grow and jump!
